

Day 12 :- Python Training

Today, I continued working on my mini project – Music Player using Python. The session was focused on refining the features, improving the user interface, and ensuring smooth functionality of the basic music playback system.

Key Tasks Completed:

- Enhanced the GUI design to make it cleaner and more responsive.
- Organized the layout by grouping playback control buttons like Play, Pause, Stop, and Next.
- Added functionality to display the currently playing song at the top of the window.
- Improved the folder browsing option, allowing users to select and load MP3 files easily.
- Handled some minor issues related to file compatibility and playback errors.
- Tested the player with different songs and ensured smooth transitions between them
